

Palash Agrawal

Synopsis: Software Developer with hands-on experience in developing and enhancing full-stack Java applications. Skilled in in end-to-end application development including requirement gathering, coding, testing, and deployment.

EXPERIENCE SUMMARY

- Having 1 year of experience in Application Development.
- Completed Full stack Java trainings.
- Hands on experience in **Core JAVA, Spring, Hibernate, Spring Boot, Micro-services, JMS, My SQL and RESTful Services.**
- Familiarity with front-end technologies such as Angular, HTML and CSS
- Worked in Agile Model of software development life cycle, also Involved in providing support by resolving tickets raised by client.
- Good in grasping new technologies and quick learner.

Areas of Experience

Languages

Java

RDBMS

MS SQL,
Oracle SQL

Operating Systems

Microsoft Windows

Development

Tools/Testing Tool

Intellij idea

Eclipse,

SQL developer,

Spring Tool Suite,

Visual Studio Code,

Postman, Swagger

QUALIFICATION

Degree	Institute	Year
Bachelor of Engineering (Computer Science Engineering)	Shri Ramdeobaba College of Engineering and Management, Nagpur	2023
Intermediate (12th)	Vardhman Public School, Itarsi	2018
SSC	Narmada Valley International School, Hoshangabad	2016

Palash Agrawal

Working with Hexaware Technologies Ltd. From May 2024 – Till date

PROJECT EXPERIENCE

Project 03

Client : DELTA Airlines

Role : Java Developer

Technologies used : Java 8, Spring Boot, Microservices, SQL-Developer, MyBatis, RESTful services, JMS, AWS.

Description:

The project involved migrating the legacy system infrastructure to a cloud-based environment, ensuring enhanced scalability, reliability, and performance. This project provided me with hands-on experience in legacy-to-cloud migration processes, enhanced my technical expertise in REST services and JMS, and deepened my understanding of deployment workflows in a cloud environment.

Roles and Responsibilities:

- Migrated RESTful services, JMS, and Db Object repositories to AWS.
- Developed and executed unit tests using JUnit to ensure code quality and reliability.
- Collaborated with cross-functional teams to ensure seamless integration and deployment.

Project 02 : Financial Forecasting

Technologies used : Java 8, Spring Boot, My SQL, RESTful services, Angular.

Description:

Developed a full-stack Java application for financial forecasting that predicts future revenue based on historical financial data and Plan Number. The system analyzes trends to provide accurate revenue projections, enabling better strategic planning and decision-making. Built using Java, Spring Boot, and Angular.

Project 01 : Loan Management System

Technologies used : Java 8, Spring Boot, My SQL, RESTful services, Angular.

Description:

Developed a full-stack Java application that allows customers to apply for loans and upload required documents. Admin users can review applications, verify submitted documents, and approve or reject loan requests based on documentation.
